

Lindisfarne Primary School, Tas GeckoPave® Acrylic surface Courts

Lindisfarne Primary School's old asphalt courts urgently required rejuvenation. The area was dull & unattractive and the surface exposed many cracks & trip points which was a hazard when the children played on it.

The school knew exactly what type of surface they wanted and looked around for surfacing companies that could satisfy their requirement. Gecko was awarded the contract because of the professionalism and thoroughness during the selection process. Gecko immediately set to work to plan out the installation process and to decide with the school on court colours, line markings and the general approach to the project.

Wes Beattie school principal had this to say

"Gecko was a very thorough and professional company to deal with From the word go they kept us informed of the project progress and it all was straight forward.

The project outcome was absolutely as expected and Gecko went the extra mile by inserting the school logo on the court which was a special surprise.

Everyone loves the new area & when it was first opened the children ran on it, jumped up & down and it was like a carnival.

I would absolutely recommend Gecko to anyone. Their reliability & cleanliness was fantastic and they were always considerate of the children".

In conjunction with the school's decision, Gecko installed two multi-purpose courts to accommodate Netball, Basketball & Tennis. The school colours were used as the colour combination for the courts, and the school's logo was inserted inside the basketball centre circle. The outcome was brilliant and totally transformed the area.

The school was extremely satisfied with their new surface and is more than happy to recommend Gecko's acrylic surfacing to anyone.

This project is just another example of the spectacular outcome GeckoPave® acrylic surfacing can do to rejuvenate any worn & tired asphalt or concrete surface.
