

Multi-Sports Area & Soccer Field

After many years of 'wear & tear' to the existing asphalt surface Deer Park West Primary opted for Gecko to provide a NEW synthetic surface on their multi-sport area.

The new generation synthetic grasses that Gecko now supplies and installs are much superior to previous types and are guaranteed for up to 12 years (MSPRO 45® PLUSH). The poor condition of the existing surface was a challenge for Gecko as it is imperative for a quality job, to install synthetic grass on a flat and stable good quality base.

Principal, Bill Gilpin & vice Principal Val Smith had this to say;

"We had Gecko install our new synthetic grass areas. From the word go Gecko was extremely easy to work with, polite and kept us informed. It just felt right working with them and consequently the project was completed with ease. Their followup and return for maintenance happened without question. Extremely helpful company and we're very happy with the installation. They provide a great service and backup and would certainly use again".

In today's climate the opportunity of having a lush green soccer field for the children to play on is unlikely unless you have a Gecko synthetic grass surface which is also bright and fun.

Deer Park West Primary School saw the need to transform their dry and dirty soccer playing area into an attractive and lush new surface which now provides a much cleaner and pleasant environment for the students to play. The dusty area which previously deterred children now also includes a running track around the perimeter of the soccer field.
