

## Multiple Sports Play Area

**Moreland Primary School** had been wanting to replace their tired looking asphalt sports area with a new surface for almost 3 years and was eventually able to through the Federal Government's National Schools' Pride funding.

Gecko was awarded the project, although not the cheapest priced supplier it was the preferred because of their follow up, availability for answering questions and being easily approachable. Consideration to the lay out of the area was important to the school and included 2 full size basketball and netball courts, 3 cricket pitches, a volleyball court and 6 bat tennis courts with a running track around the perimeter.

**John Williams, School Principal had this to say;**  
*"Our new sports play area is amazingly positive; they say **build it & they all come**. Since its completion the kids have always been on it & now they organise their own games. It provides a fantastic environment where the kids work & play together with consideration to one another's games.*

*I'm astounded that it looks like it's been there for years, and I'm looking forward to the inter-school sports to show it off. I don't have one qualm in recommending Gecko to any other person".*

Gecko's experience and history demonstrated its ability to confidently complete such a complex project.

During the installation process Gecko makes a point of explaining where they are in the process and what the next steps are so the client fully understands the process

For this synthetic grass project we recommended & used **Gecko's MS Pro19®** synthetic grass product which provides not only a *durable*, but an extremely *colourful* surface which is ideal for this schools application.
