

## Nar Nar Goon Primary School, Vic Landscape & Playground areas

In one of the fastest growing corridors on the east side of Melbourne **Nar Nar Goon Primary School** urgently needed an infrastructure upgrade to keep up with growth.

After new building works had been completed the school looked at surfacing options for the student play areas and for general landscaping. The surface needed to be for all purposes, durable and be functional in all weather conditions particularly when wet. Concrete & asphalt was both unattractive & less forgiving, and mulch created a tremendous mess after being carried on shoes into the classrooms which was difficult to clean.

Eventually the school arrived with the conclusion of using Gecko to install synthetic grass.

### Jay Stent school principal had this to say

*"Gecko was employed not just because the company was local, but it was competitively priced, prompt & able to work with the school to arrive with some relevant designs.*

*I've worked with dozens of contractors over the past 2 years and Gecko's promptness, reliability and professionalism is fantastic. The installation blokes are friendly & obliging and everything they said they'd do, happened.*

*I would highly recommend Gecko to anyone and would be very happy to use their services again on future projects. We found their quotes highly competitive and advice & service professional and focused directly on our needs".*

Gecko worked with the school to arrive with some suggested applications & designs to utilize the school's new areas.

The design outcome included synthetic grass quiet & landscaped areas, a Multi-sport court play area and the installation of *Gecko's Soft-fall Playground System™* under the play equipment. These installations certainly made the areas cleaner & more functional, and added great colour to the schools grounds.

Now, whether it rains, hails or shines the children can play in comfort & without creating a mess in or out of the classroom.
