### GeckoPave® Acrylic Surface Netball Courts

The **Sale Netball Complex** which was formally opened in March 2011 was a project that Wellington Shire Council had been planning for many years earlier.

With the growth in the local area and the Sale Hospital requiring more land to build additional facilities it meant that the netball courts located adjacent to the hospital would be a likely place to expand. Therefore the council needed to find a new location to relocate the netball courts.

This situation provided the council with an opportunity to support the local community not only with relocating the netball courts, but with a much bigger & better facility than was originally planned.

A location was earmarked at the eastern fringe of the township where there was plenty of room. A master plan was developed in consideration to the growing community and the increased demand for facilities to support the greater number of people playing sports such as netball and basketball. It was proposed to build a 'state of the art' complex which would support all the needs of the local community.

Works commenced 2009 and it took almost 2 years to complete. A huge number of contractors were involved who all had special skills which ensured the project was the very best.

**The end result was magnificent.....the complex included 4 indoor basketball courts and an outdoor area of 12 GeckoPave® netball courts covering almost 10,000sq. metres.** Gecko's involvement extended to the installation of the outdoor netball courts' surface which is made up of layers of acrylic polymers forming a durable and attractive playing area. This surface also provides fantastic anti-slip properties which means athletes won't slip over.

The outcome was brilliant and this project is just another example of the spectacular outcome Gecko's acrylic surfacing can provide in a community used environment.

The Wellington Shire Council was extremely satisfied with their new surface and is more than happy to recommend Gecko's acrylic surfacing to anyone.
