

St Mary's Primary School Yarram VIC

Playground and Multi-Sports Area

St Mary's Primary School in Yarram is the first to have Gecko install its NEW Soft-fall playground system™.

Gecko's latest Soft-fall mat, which complies with the Critical Fall Height Standard AS/NZS 4422:1996 has been installed underneath the synthetic grass surface with great success.

St Mary's looked at alternatives before employing Gecko's Soft-fall system that provides a lush grass surface which 'looks great and feels good'. Underneath the grass is the highly durable Soft Fall mat which absorbs children's falls and spills.

Di Austen, School Principal has this to say;

"We employed Gecko to install our new synthetic grass areas including around the play equipment.

*They were able to recommend some different options including **soft fall under the grass which not only feels good but looks great.***

The children love the new areas and are very proud of them.

***Gecko provides a great service and backup** and we are looking to use them again for more areas."*

In conjunction with St Mary's new playground Gecko installed a new Multi-Sport synthetic grass surface.

The school saw the need to transform their dry and dirty playing area into a more attractive surface. Consequently Gecko was able to create a new colourful and fun surface which now promotes children playing and provides a much cleaner and pleasant environment.

The dusty area which obviously deterred children has been replaced by a useable surface including a running track around the perimeter of the court.
